

GREAT BOULDER MOVES TO 100% OWNERSHIP OF YAMARNA

HIGHLIGHTS

- **Great Boulder has increased its ownership in the Yamarna Project from 75% to 100%**
- **EGMC's minority interest in Yamarna has converted to a 2% NSR**
- **The Yamarna Project includes the Copper-Nickel-Cobalt sulphide discoveries at Mt Venn and Eastern Mafic. Significant drill intersections include:**
 - **48m at 0.8% Cu, 0.2% Ni, 0.07% Co from 103m in 17MVRC015**
 - **18m at 0.8% Cu, 0.1% Ni, 0.02% Co from 187m in 17MVRC001**
 - **27m at 0.6% Cu, 0.2% Ni, 0.05% Co from 43m in 18MVRC001**
- **Consolidated ownership of Yamarna simplifies the strategic review underway evaluating options to unlock value from the Yamarna and Winchester Base Metal / Gold Projects**

Great Boulder Resources (“**Great Boulder**” or the “**Company**”) (ASX: **GBR**) is pleased to announce that it has now assumed 100% ownership of the Yamarna Project (“**Yamarna**”), east of Laverton in Western Australia.

The Yamarna Project was previously a contributing 75:25 joint venture (JV) between Great Boulder and Eastern Goldfields Mining Company Pty Ltd (“**EGMC**”). EGMC is a private exploration company owned by Goldfields-based businessman Murray Black, who is also a founder and former Director of Great Boulder.

Under the terms of the Yamarna JV EGMC's interest was diluting due to ongoing expenditure at Yamarna by Great Boulder, and the Company has now elected to convert EGMC's remaining interest to a 2% Net Smelter Royalty (NSR). This simplifies ownership of the Project while Great Boulder considers a number of strategic options to unlock immediate value for Great Boulder shareholders while maintaining maximum exposure to future upside.

Great Boulder's Managing Director, Andrew Paterson commented:

“This is a great result for shareholders, consolidating 100% of Yamarna as we move forward”.

“I'd like to acknowledge the contribution of Murray Black, who vended the Project into GBR prior to its IPO in 2016. That led to the discovery of significant magmatic-hosted sulphide deposits at Mt Venn in 2017, and Eastern Mafic in 2018”.

“We are now reviewing all options to move the project forward in a way that will reward our shareholders and provide exposure to future upside at Yamarna”.

FIGURE 1: THE YAMARNA & WINCHESTER CU-NI-CO SULPHIDE PROJECTS

Background

The Yamarna Project comprises eight granted tenements across two projects, Winchester and Yamarna, covering 358km² of tenure. The Project is located c.130km east of Laverton and 25km west of Gold Road’s and Gold Fields’ +6Moz Gruyere Gold Mine. Yamarna is a multi-commodity project with potential for magmatic Ni-Cu-PGE mineralisation and lode gold.

Great Boulder’s core focus has been on the Mt Venn base metals sulphide deposit discovered in October 2017. Following this the Company completed 13,700m drilling that demonstrated multiple, broad lenses of shallow Cu-Ni-Co sulphide mineralisation. Drill targeting based upon EM surveys has been extremely successful, with sulphides identified in every EM target drilled to date.

Mineralisation at Mt Venn occurs within multiple broad lenses, with significant results including:

- 48m at 0.8% Cu, 0.2% Ni, 0.07% Co from 103m in 17MVRC015
- 18m at 0.8% Cu, 0.1% Ni, 0.02% Co from 187m in 17MVRC001
- 18m at 0.7% Cu, 0.2% Ni, 0.05% Co from 92m in 17MVRC022
- 27m at 0.6% Cu, 0.2% Ni, 0.05% Co from 43m in 18MVRC001

Extensions to the north and south show mineralisation is continuous, consistent and remains open along strike. The Company has only tested the Mt Venn lodes to a maximum depth of 260m below surface.

The Eastern Mafic Complex is a less advanced exploration project. With only 36 RC and Diamond holes drilled since its discovery in 2018, Eastern Mafic hosts a number of Ni-Cu-Co sulphide prospects which require further drilling to unlock their full potential.

FIGURE 2: CHALCOPYRITE-PYRRHOTITE MINERALISATION IN MT VENN DRILL CORE

Metallurgical test-work has shown that the Mt Venn sulphides are amenable to simple grinding and flotation to recover a copper concentrate, followed by leaching of the tails to recover nickel and cobalt into solution. With metal extractions of greater than 90% achieved in testing this makes Mt Venn an attractive proposition for the battery metals market.

Nickel Sulphide	Copper Sulphide	Cobalt Sulphate
 <p data-bbox="296 1935 395 1966">42% Ni</p>	 <p data-bbox="724 1935 823 1966">46% Cu</p>	 <p data-bbox="1152 1935 1251 1966">29% Co</p>

TABLE 1: YAMARNA TENEMENT SCHEDULE

Tenement	Project	Status	Grant Date	Area km ²
E38/2320	Yamarna	Granted	23/3/2011	9
E38/2685	Yamarna	Granted	17/9/2013	36
E38/2952	Yamarna	Granted	2/8/2016	9
E38/2953	Yamarna	Granted	2/8/2016	58
E38/2957	Yamarna	Granted	2/8/2016	181
E38/2958	Yamarna	Granted	2/8/2016	14
P38/4178	Yamarna	Granted	9/3/2016	1

About Great Boulder Resources

Great Boulder is a mineral exploration company with a portfolio of highly prospective gold and base metals assets ranging from greenfields through to advanced exploration located in Western Australia. The Company's core focus is advancing the Whiteheads and Side Well gold projects while progressing initial exploration at the earlier stage Wellington Base Metal Project located in an emerging MVT province. Great Boulder is also conducting a strategic review of the advanced Yamarna copper-nickel-cobalt project. With a portfolio of highly prospective assets plus the backing of a strong technical team, the Company is well positioned for future success.

Competent Person's Statement

Exploration information in this Announcement is based upon work undertaken by Mr Andrew Paterson who is a Member of the Australasian Institute of Geoscientists (AIG). Mr Paterson has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a 'Competent Person' as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' (JORC Code). Mr Paterson is an employee of Great Boulder Resources and consents to the inclusion in the report of the matters based on their information in the form and context in which it appears.
