

# Drilling commences at Whiteheads

## 2,000m RC program underway on brownfields targets

Great Boulder Resources Limited [ASX: GBR] is pleased to announce that RC drilling has commenced at the Whiteheads gold project, 60km north of Kalgoorlie in Western Australia.

Having acquired an exploration option over the project with Zebina Minerals at the end of August the Company has moved quickly to commence exploration. The initial program will consist of approximately 2,000m of RC drilling on advanced prospects at Seven Leaders, Lady Betty and Whiteheads Find.

**FIGURE 1: RC DRILL CREW ON SITE AT WHITEHEADS.**

The RC program should take two weeks, with assay results expected within three to four weeks of completion of drilling.

“It’s good to have the rig turning at Whiteheads” commented Great Boulder’s Managing Director Andrew Paterson.

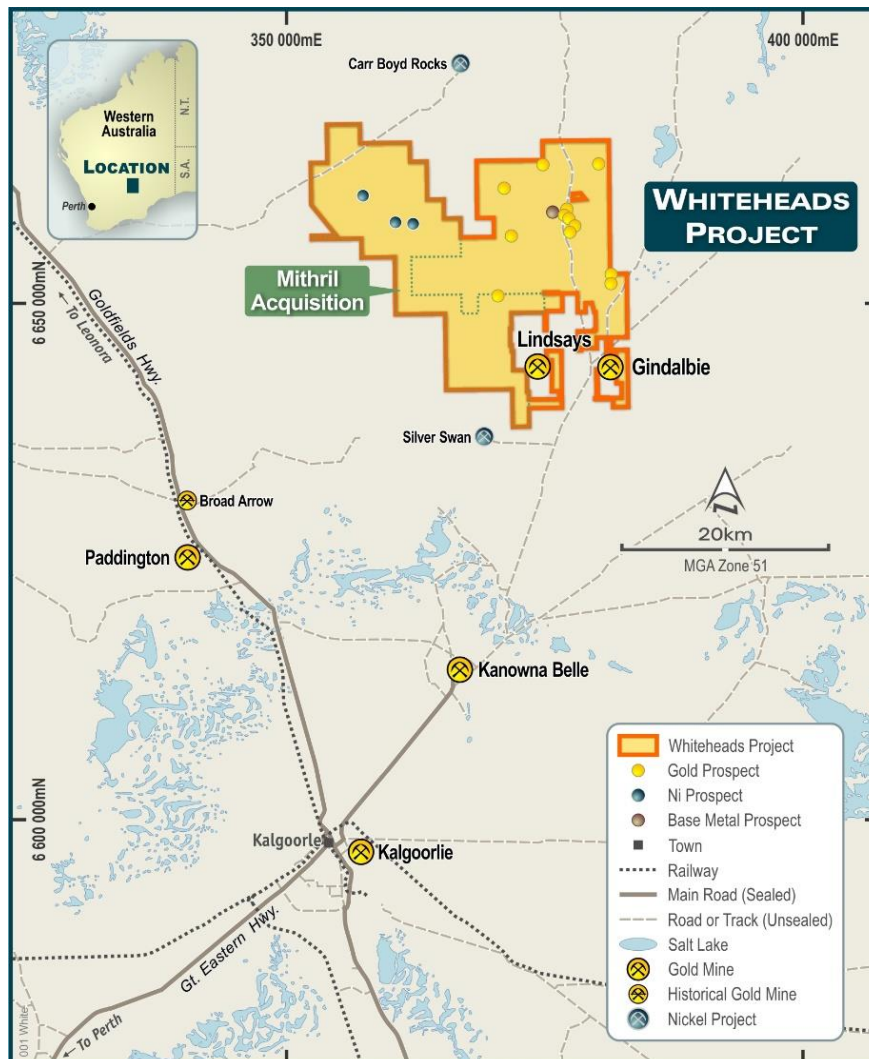

“We have a lot of field activity planned over the next few months to unlock the potential of this area. It’s an exciting project and I’m looking forward to receiving the assay results from this drilling.”

**Further work:**

Other work planned on the Whiteheads project includes:

- Structural mapping on the Whiteheads corridor;
- High-resolution dronemag (aerial magnetic geophysical) surveys over Seven Leaders, and over the Lady Betty to Whiteheads Find area; and
- Soil sampling at Painkiller

The Company is also reviewing historic soil geochemistry on the Arsenal trend in order to prioritise further auger sampling and/or aircore drilling.
